

General

This section provides the basic information about the park or trail and the organizations responsible for it.

Park/Trail ID # 14-005D	Funding Application 17-0073-F	Park/Trail Name Memorial Park
Last Update July 05, 2017		
District 3	Project Name Infrastructure Improvements Phase II	

Project Description

The re-envisioned Granite Falls Memorial Park transforms the currently underutilized public amenity into a regional destination for outdoor recreation and environmental exploration. The proposed master plan divides the park into 11 zones to offer visitors a diversity of camping opportunities, trail experiences and day-trip amenities while enhancing the ecological character of the park that highlights and preserves its rich cultural, ecological, and geologic history (see Concept Plan Zones map). Phase 1 of the Memorial Park's infrastructure improvements addressed the top three priorities outlined in the Memorial Master Plan. This Phase II funding request addresses the south section of Memorial park which includes the next five top priorities for the park. This project will do the following:

- Reconfigure the south side of the park to create a more public space with a playground near the entrance on the south side of the park and move the RV campground near the new shower house which is more private and more accessible
- Remove outdated playground equipment and add nature-based playground
- Restore and enhance the ecological landscape back to original plants and habitat on the south side of the park
- Complete the rustic gravel trail to the overlook and add seating at the overlook
- Design and install directional signage, entrance signs, interpretive signage and a kiosk in the park

Phase II will accomplish all important infrastructure projects identified in the plan in this 16-acre section of the park except the family campground remote camping sites and hiking trails. The main rustic gravel trail to the outlook will be completed in this phase, but future trails will be established after the restoration when the natural location for the trail system will be more become more apparent. Camping areas on the south side of the park will be identified in this phase as part of the ecological restoration, but the family campground and remote sites will be fully established in a later phase after the ecological restoration has had time to stabilize and be well established. Benefits of the proposed infrastructure are multiple: the quality of the visitor's experience will be significantly improved with the ecological regimen, and educational and camping opportunities will be greatly enhanced for local and regional visitors alike. This is very important in Memorial Park as the natural resources of this park are regionally significant. A more detailed description of the improvements is below: RV Camp Sites Improvements Description: The RV campground

will be relocated to an area currently occupied by the old playground and two old shelters. This area is more internal to the park and close to the shower house. The relocation will enhance the camping experience and reduce conflicts with casual daytime users. The new sites will be sized to accommodate a range of campers; some "pull-through" sites will allow easy access and departure. Updated electrical hookups and potable water will be available at all new sites. Deliverables: 9 pull-through sites & 5 back-in sites, bituminous road reconfiguration to access sites, clearing & grading, electrical improvements at RV sites and installation of an electrical pay station Picnic Shelter & Destination Playground

Improvements Description: The plan recommends nature-based play at the south playground, taking cues from the park itself to expand the recreational experience into an educational one as well. A picnic shelter, small shelter, volleyball and basketball courts will also be included in the site improvements. Deliverables: Picnic Shelter, Small Shelter, Playground and other site improvements

South Restoration Area Improvement Description: The area identified for improvements in this phase includes a scenic overlook that provides a breathtaking view of the majestic Minnesota River Valley. A rustic hiking trail will be developed to the outlook and seating will be installed. Deliverables: Rustic gravel hiking trails through prairie to overlook, overlook seating & amenities.

Wayfinding & Signage Description: Much needed signage in the park will be developed to navigate users to the new amenities, as well as give opportunities for some basic interpretation of the educational opportunities of the park. This funding request is for: directional signage, a park entrance sign (north and south), interpretive signage and a kiosk. Deliverables: N&S park entrance signage, directional signage, interpretive signage

Ecological Restoration Description: The ecological restoration will follow the recommendations and guidelines outlined in the Natural Resource Management Plan in the Memorial Park Master Plan. Vegetation communities in the phase 2 improvement areas primarily include Woodland, Woodland Outcrop, Bedrock Prairie, Mesic Prairie and a small area of mixed emergent marsh. Enhancing these native habitats during the phase II improvements will begin with the removal of invasive and undesirable species in addition to regular management activities such as manual cutting, selective herbicide use, and prescriptive burning. Restoration activities will also consist of enhancement planting to further stabilize and support biodiversity of the native plant communities. Enhancement planting will not only include seeding and planting in the natural habitat areas but will also include strategic landscape planting in the development areas to reduce erosion and impacts of other human-use activities. Rain gardens will be installed to manage stormwater runoff from the newly developed RV camping area and picnic/play area. The use of native plant species throughout the developed areas of the park will draw from the adjacent plant communities to support wildlife habitat and maintain the natural character of the park's occupied spaces. Deliverables: Initial enhancement & restoration + short-term (3-yr establishment) management in areas around RV & family campsites, picnic/play area, and throughout remote campsite & trail areas south of Hwy 67.

Funding

Legacy Pillars:

- Connect People and the Outdoors
- Acquire Land and Create Opportunities
- Take Care of What We Have

Project Outcomes

Connection to Pillars

This section will list each of the improvements identified in this proposal and then outline how they are related to specific components of the GMRPTC's Strategic Plan and 25-year Parks & Trails Legacy Plan.

RV Camp Sites

The proposed campsite improvements address two of the seven key strategies outlined in the GMRPTC Strategic Plan's Connect People to the Outdoors Pillar: access and quality. The improvements also address the development and redevelopment strategy outlined in the GMRPTC Strategic Plan's Acquire Land, Create Opportunities pillar. The improvements also address the Take Care of What We Have Now Pillar's strategy to 'protect the public's investment in built infrastructure and natural resources'. The proposed improvements also consider guiding principles from Memorial Park's Master Plan.

Connect People to the Outdoors

Access: By moving the RV Camp Sites, circulation of the park will improve. Currently, visitors are driving through the campground to access different parts of the park. The current campground area is also along the memorial/amphitheater and outcrops which is an area that should be more accessible and welcoming to the public. The new campground area will be located along a road that will be used solely for the campground and not needed for other uses of the park. The new campground will expand the recreational opportunities by offering pull through camping as well as back-in sites. The clearing and grading of the area and the bituminous road reconfiguration will also make the park more accessible to people of all abilities. These RV camp sites will also be near the new bath/shower house, and offer great privacy and accessibility. The fire

pits and picnic tables at each site will comply with ADA standards and the new RV campground areas will provide more space between campsites to allow for easier navigation with RVs and camper trailers. It physically connects communities with parks and trails by providing a type of lodging for regional visitors.

Quality: An electrical pay station will modernize the payment process and ensure a high-quality experience. The current campground offers back-in sites only and offers very dated utilities and amenities. The goal with the new campground will be to continue the rustic feel with updated services to offer a quality experience. Infrastructure improvements include creating pull-through sites & back-in sites with electric, full hook-up with water and septic, bituminous road reconfiguration to access sites, clearing & grading, electrical improvements at RV sites and installation of an electrical pay station.

Acquire Land, Create Opportunities

Development and Redevelopment:

Under the design, develop, and redevelop parks and trails facilities section of the development and redevelopment strategy, the need for redeveloping camping facilities and designing paved trails with high-quality corridors and connections are both identified. By redesigning and upgrading the RV campsite, Memorial Park will accomplish the goal of developing camping facilities while providing more separation and privacy between sites. The improved campsite will also provide higher-quality natural surroundings that will be undisturbed by park through-traffic.

Take Care of What We Have Now

The RV campsite improvement will bring facilities up to modern codes and standards by including picnic tables and fire pits that are ADA accessible. It will make it easy for everyone to access the campsite by improving the layout of the park. It will make it easy for everyone to enjoy the park by removing through-traffic from areas that are not amenable to through-traffic. These improvements will also help Memorial Park adapt to today's needs and lifestyles by providing access to electricity, hook-ups and improved access to the restroom.

Protect the Public's Investment in Built Infrastructure and Natural Resources

This funding request addresses the aging infrastructure in the RV camp sites and playground. The campground area was last improved in the 1960s. These improvements will enable Memorial Park to adapt to today's needs and lifestyles, including providing for the increasing need for access to electricity. There will be full hook-ups at the RV campsite for guests as well as a septic tank installed to serve the bathroom near the RV campsite. Restoring worn-out, degraded facilities will also be addressed through the bituminous road reconfiguration. The rustic gravel trails through prairie to overlook will also be surfaced.

Memorial Park Master Plan

The proposed improvements also consider the following guiding principles in the Master Plan: access and connectivity, improve/upgrade infrastructure, and expand camping options.

Picnic Shelter & Destination Playground Improvements

The proposed picnic shelter & destination playground improvements address all three benchmarks identified in the GMRPTC Connect People to the Outdoors Pillar. The improvements also address the development and redevelopment strategy outlined in the GMRPTC Strategic Plan's Acquire Land, Create Opportunities pillar. The improvements will also address the Connect People to the Outdoors Pillar access strategy as defined by the commission. The proposed improvements also consider guiding principles from Memorial Park's Master Plan.

Connect People to the Outdoors

Benchmarks for Desired Outcomes: The three benchmarks for desired outcomes identified in the GMRPTC Strategic Plan are: visits to Minnesota's parks and trails of state and regional significance; visits from youth and young adults to Minnesota state parks and trails; and visits from youth & young adults to regional parks and trails. By providing a picnic shelter and destination playground, Memorial Park can address all three of

these: 1) it will effectively serve the identified target markets of youth, families with children and older adults, 2) youth will have more places to play within the park, 3) parents will have a place to prepare and provide high quality food for their children while enjoying Memorial Park, and 3) older adults can rest and prepare food.

Access:

The picnic shelter & destination playground improvements will provide Minnesotans with parks and trails they can get to easily. The park is located within the city of Granite Falls, which is served by Granite Falls Transit, an in-town bus service. The playground will be accessible by bicycle, watercraft or city bus. The improvements will also develop and rehabilitate the current, outdated playground area into a more modern and natural amenity for guests of the park. Universal access will be provided on a significant portion of the equipment, meeting the Americans with Disabilities Act Accessibility Guidelines.

Acquire Land, Create Opportunities

Development and Redevelopment:

Under the design, develop, and redevelop parks and trails facilities section of the development and redevelopment strategy, the need for recognizing the importance of a natural setting to visitors for a high-quality experience is identified. Creating a destination playground will provide a nature-based play experience for younger guests of Memorial Park. The destination playground will be unique and will take advantage of the rock formations in that area of the park. It will celebrate the outcrops, plants and animals, and will be designed to blend into the landscape. The area next to this playground area will also be developed further in future phases by enhancing the water feature and adding trails. The nature based play will add new recreational opportunities that will be unique to the region. The nature-based play at the south playground takes cues from the park itself to expand the recreational experience into an educational one as well.

Protect the Public's Investment in Built Infrastructure and Natural Resources

This funding request addresses the aging infrastructure in the RV camp sites and playground. The playground equipment at the current park is outdated and aging. The RV camp sites also do not currently feature any pull-through options. The proposed investments will not only replace and update the playground area, it will also update the RV campsite with an electric pay booth, full hook-ups and pull-through spots.

Memorial Park Master Plan

The proposed improvements also consider the following guiding principles in the Master Plan: access and connectivity, improve & upgrade infrastructure, celebrate the unique sense of place and expand traditional recreational opportunities.

South Restoration Area Improvement: Trails to the Overlook and Overlook Seating Amenities

The proposed south restoration area improvements address the Connect People to the Outdoors Pillar's access and quality strategies as defined by the commission. The improvements also address the development and redevelopment strategy outlined in the GMRPTC Strategic Plan's Acquire Land, Create Opportunities pillar. The improvements also address the Take Care of What We Have Now Pillar's 'maintain the quality of natural resources in parks and trails of state and regional significance' strategy. The proposed improvements also consider guiding principles from Memorial Park's Master Plan.

Connect People to the Outdoors

Access:

The trail and improvements at the outlook will create a trail opportunity for the region that is accessible on foot or by bicycle. The redesigned bituminous roadway through the RV campsite will allow access to the trail leading to the scenic outlook.

Quality:

The trail connection to the scenic outlook will provide a high-quality experience to visitors by making wise use of resources. The scenic outlook is one of the most unique and high-quality aspects of Memorial Park and

providing a high-quality rustic gravel trail to this area will ensure that users of varying abilities will be able to experience this regional highlight.

Acquire Land, Create Opportunities Development and Redevelopment

The GMRPTC Strategic Plan recognizes the importance of a natural setting to visitors for a high-quality experience. The rustic gravel trail leading to the scenic Minnesota River Valley outlook utilizes one of the most dramatic natural settings in the region.

Take Care of What We Have Now

Maintain the Quality of Natural Resources in Parks and Trails of State and Regional Significance

The improvements proposed for the south area of the park will preserve high-quality natural areas and water resources. By improving connections to some of the park's most impressive features, we ensure that people of varying abilities will be able to continue to enjoy these aspects of the park.

Memorial Park Master Plan

The South Restoration Area Improvements considers the following guiding principles in the Master Plan: access and connectivity, improve upgrade infrastructure, and celebrate the unique sense of place.

Wayfinding & Signage

The proposed wayfinding and signage improvements address two of the seven key strategies outlined in the GMRPTC Strategic Plan's Connect People to the Outdoors Pillar: access and quality. The wayfinding & signage also considers the following guiding principles in the Master Plan: improve orientation, celebrate the unique sense of place and improve safety.

Connect People to the Outdoors

Access:

The wayfinding and signage improvements will aid the Greater Minnesota Regional Parks and Trail Commission in achieving several of the strategic directions outlined in the Parks and Trails Legacy Plan. They will provide more effective marketing by helping visitors of the park understand everything that is available to them in Memorial Park. It will also provide a welcoming environment by making it easier for visitors to navigate the park and find the attractions more easily. The new signage will also make the park more accessible to people of all abilities by making the park easier to navigate.

Quality:

The wayfinding and signage improvements will provide a high-quality experience to guests of Memorial Park by designing the experience thoughtfully. The park is large and contains many attractions. By developing and constructing thoughtful signage, it will ensure guests of the park are aware of all the park amenities and locations so they can plan and prioritize their visit.

Memorial Park Master Plan

The Wayfinding & Signage considers the following guiding principles in the Master Plan: improve orientation, celebrate the unique sense of place and improve safety. Currently, signage in the park is sparse. The addition of wayfinding and signage will help market the park by offering information for by-passers and those who stop, provide a welcoming environment to visitors and offer education on what is in the park. Entrance signage will alert road traffic that they are entering a park and to use caution.

Ecological Restoration

Given its unique diversity, restoring the ecological integrity of the entire park has been a priority of park advocates for years. The master plan proposes an aggressive regimen to accomplish this, beginning with a three year, professionally guided program to remove invasive species and to begin reintroducing native plant systems into the site. The restoration plan also outlines ongoing activities that will be required after the initial

three-year program to enhance and maintain the quality of the natural environment at Memorial Park over time.

The proposed ecological restoration addresses the quality strategy outlined in the GMRPTC Strategic Plan's Connect People to the Outdoors Pillar. They also address two of the benchmarks outlined in the GMRPTC Strategic Plan's Take Care of What We Have Pillar: acres of natural areas preserved, restored & reconstructed at parks & trails and number of parks & trails mapped for terrestrial invasive plants. It will also protect the public's investment in built infrastructure & natural resources and maintain the quality of natural resources in parks and trails of state and regional significance. The Ecological Restoration also considers guiding principles in the Memorial Park Master Plan.

Connect People to the Outdoors

Quality:

The GMRPTC Connect People to the Outdoors Pillar identifies timely repair and maintenance of high-demand facilities as extremely important. By beginning the restoration of the native plant species and the removal of the invasive and undesirable species, the high-use south end of the park can be repaired and maintained to a level not currently possible.

Take Care of What We Have

Benchmarks

The ecological restoration would assist the GMRPTC in accomplishing a number of identified benchmarks and strategies they've outlined for their statewide system. A key area identified by the GMRPTC Strategic Plan is maintaining the quality of natural resources. The proposed ecological restoration would both maintain and protect the quality of natural resources within Memorial Park. Two of the key benchmarks identified by the plan are acres of natural areas preserved, restored & reconstructed at parks & trails and number of parks & trails mapped for terrestrial invasive plants. The ecological restoration outlined in the proposed improvements would address both of these key benchmarks by preserving 16 acres of natural area in the south section of Memorial Park and the trails within.

Maintain the Quality of Natural Resources in Parks and Trails of State and Regional Significance

Natural communities are most often degraded through the introduction and spread of invasive species. The GMRPTC Strategic Plan identifies preserving intact natural communities ensure that they are not degraded over time by introduction of invasive species. The proposed ecological restoration will begin the removal of invasive and undesirable species and stabilize and support the native plant communities. The GMRPTC Strategic Plan also calls for designing and managing parks and trails to help visitors prevent the unintended spread of invasive species. The proposed enhancement planting will also reduce erosion and impacts of other human-use activities.

Memorial Park Master Plan

The Ecological Restoration also considers the following guiding principles in the Master Plan: restore ecological integrity and celebrate the unique sense of place.

Connection to Regional Values

Memorial Park is regionally significant because it serves both local and regional visitors for a diversity of outdoor recreation activities. It uniquely offers nature-based outdoor activities along the Minnesota River and the rapids of Minnesota Falls, and provides access to the rare granite outcrop landscape. The outcroppings throughout Memorial Park are some of the few that are preserved in their natural state. It is also an important point along the soon to be implemented Minnesota Trail System. Not only does Memorial Park provide a rare opportunity for visitors to interact with this unique landscape, but it is also one of the most extensively developed and well-preserved Rustic Style parks in southwestern Minnesota. The natural character, trails and camping features of Memorial can draw both local and destination tourists as they visit the area, including visitors from nearby parks and campgrounds. The park provides excellent examples of the compatibility between man-made construction and nature.

The Greater Minnesota Regional Parks and Trails Commission Strategic Plan (2015) outlines five regional principles/themes. Phase II of the Memorial Park Infrastructure Improvements project aligns with GMRPTC principles/themes one and two: supporting merit-based projects most relevant to and valued by residents of, and visitors to, Greater Minnesota and supporting projects emphasizing high quality outdoor experiences and healthy lifestyles.

Principle/theme one “places a priority on near-home park and trail projects in areas that are more densely settled, rapidly growing, and/or an established regional center.” Granite Falls is one of the largest populated cities in the surrounding five-county region and the county seat of Yellow Medicine County. It is also densely settled with 760 people per square mile. Memorial Park is located within the city boundaries on the city’s south side. The park’s close proximity to Granite Falls and nearby Montevideo (14 miles from Memorial Park) makes this park a near-home park for a combined 8,104 people.

Principle/theme one’s “underlying goal is to maintain confidence that top ranked projects are in alignment with what people really value.” The community’s value in this park is evidenced by the constant utilization of existing park facilities. The RV campground identified in this improvement phase is at capacity, even during off-peak days. The city’s value in this park is evidenced by the staff the city dedicated to the upkeep and maintenance of the park despite the fact the city does not have the capacity to support a parks and recreation department. The city is also putting up over \$200,000 in match funding for the first two phases of infrastructure improvements for Memorial Park. This is a significant sum for a city with a population of 2,897.

Principle/theme two “relates to developing facilities with a keen focus on quality outdoor recreation, education, health, cultural, scenic, and historic interpretation experiences.” The size, scope and diversity of recreational opportunities at Memorial Park make the park a quality outdoor recreation experience of regional significance. The modernization of the RV camp site will ensure a quality experience for guests who choose to stay at Memorial Park. The redesigning of the road through the park will contribute to this high-quality experience by removing through-traffic from the campsite and will also make the park safer for all guests, especially young children. The outlook that will be improved provides a breathtaking scenic overlook of the Minnesota River. The destination playground will provide a play area for children near the campground that will not detract from the natural feel of the park.

Phase II completes major infrastructure improvements on 16 acres of the south side of the park. The family campground, remote sites campground and trails are located in the project area, but are not included in the scope of this improvement project. Phasing the improvements on the south side of the park will target the most heavily used amenities in this park area while making the project manageable. It will also give time for the restoration area to stabilize before the family campground and remotes sites are completed. The trail work can be developed when the restoration area is further along and can offer the natural location of the trails.

Project Readiness

Project Lead

The City of Granite Falls will be the project lead.

Implementation Timeline

Design and Planning Process: Sept 2018- February 2019

Bidding & Award: March-April 2019

Site Construction May 2019- (Nov 2020 (Substantial Completion)); June 2021 (Final Completion)

- Demolition & Road reconstruction: May 2019-Nov 2019
- RV Campsite/ Picnic Area/ Signage & Trail construction March/April 2019 – Nov 2020 (Sub. Completion)
- Ecological Restoration Activities can begin really at any time, and just work with the construction schedule

Design Standards

All projects completed in Memorial Park will be ADA compliant. Universal accessibility is a primary goal of the plan; to the extent possible, this will guide the redesign of recreation and infrastructural components.

Project Cost Breakdown

Below is a basic project cost breakdown. For more detail, please reference the itemized cost analysis included with the application.

RV Camp Sites Improvements

Pull through sites & back in sites, bituminous road reconfiguration to access sites, clearing & grading, electrical improvements at RV sites and installation of electrical pay station.

Project cost: \$516,635.98

Picnic Shelter & Destination Playground Improvements

Project cost: \$189,000.00

South Restoration Area Improvement

Rustic gravel hiking trails through prairie to overlook, overlook seating & amenities.

Project cost: \$37,170.00

Wayfinding & Signage

N&S park entrance signage, directional signage, interpretive signage

Project cost: \$39,438.00

Ecological Restoration

Initial enhancement & restoration + short-term (3-yr establishment) management in areas around RV & family campsites, picnic/play area, and throughout remote campsite & trail areas south of Hwy 67.

Project cost: \$79,239.78

Funding Request Breakdown
